Scott Wehrwein

Tree Rotations

# Goals

Be able to execute BST **rotations** on paper.

Be prepared to implement BST rotations.

# Measuring Badness

Bad tree =(

Good tree =)

how bad? how good?

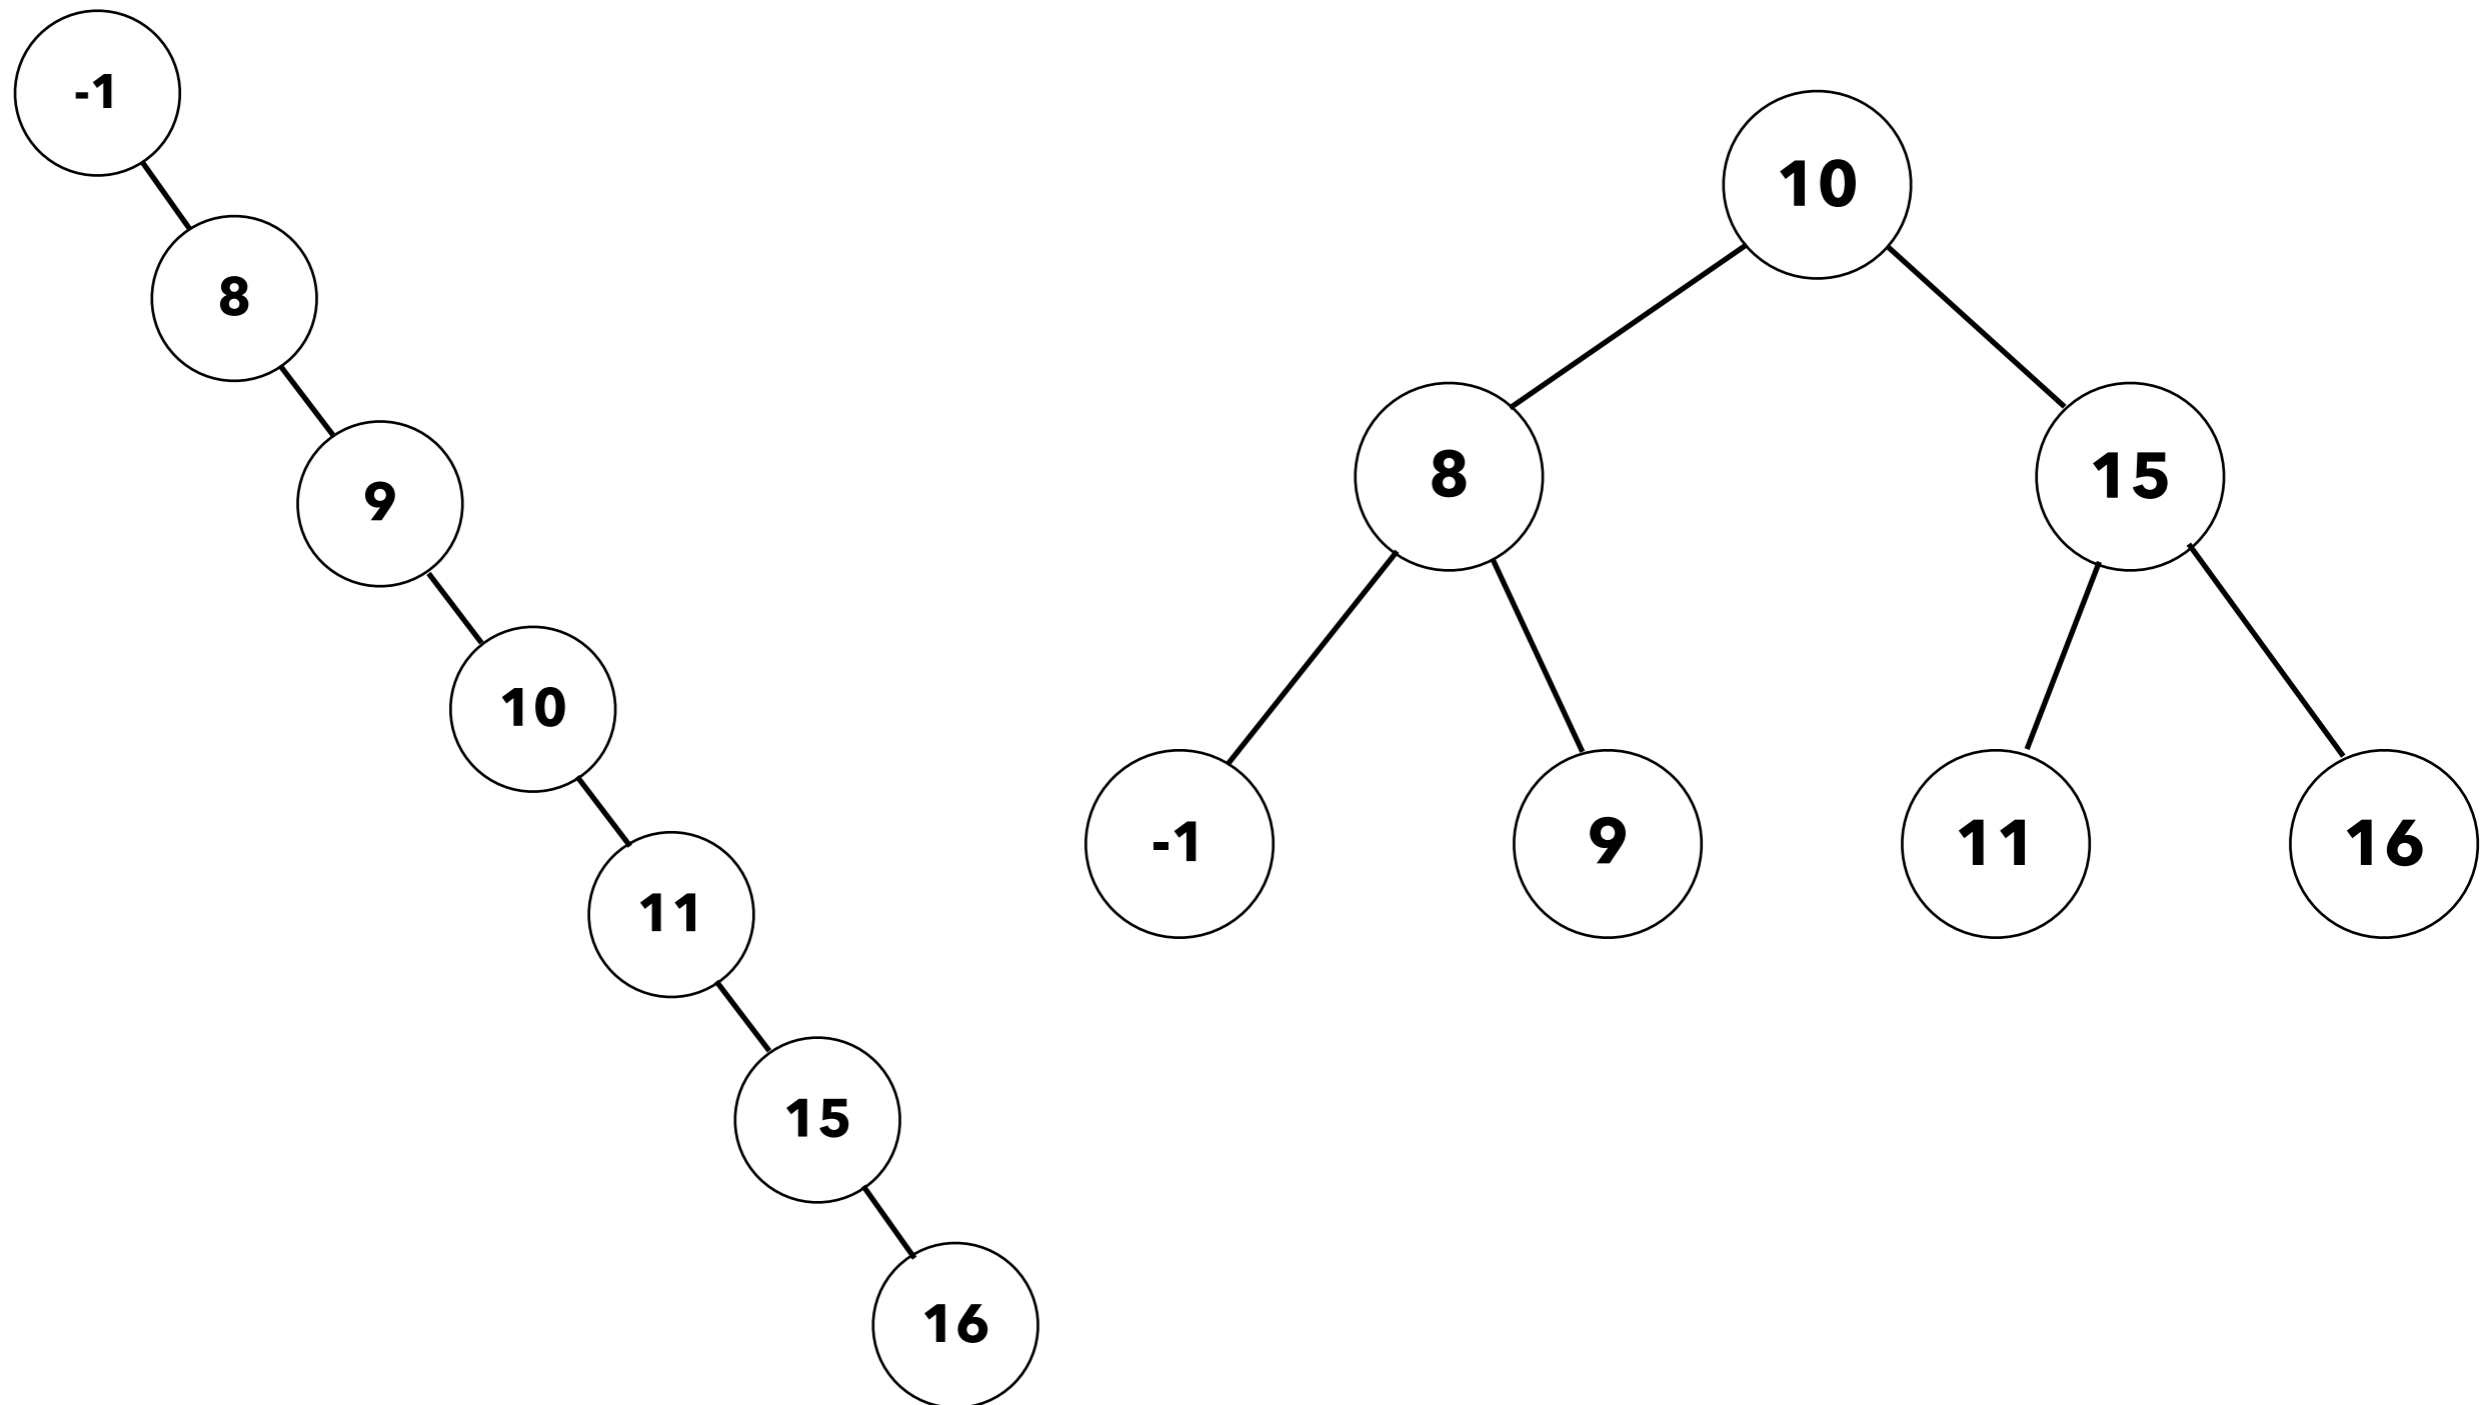

# Measuring Badness

$\text{Balance}(n)$ :  $\text{height}(n.\text{right}) - \text{height}(n.\text{left})$

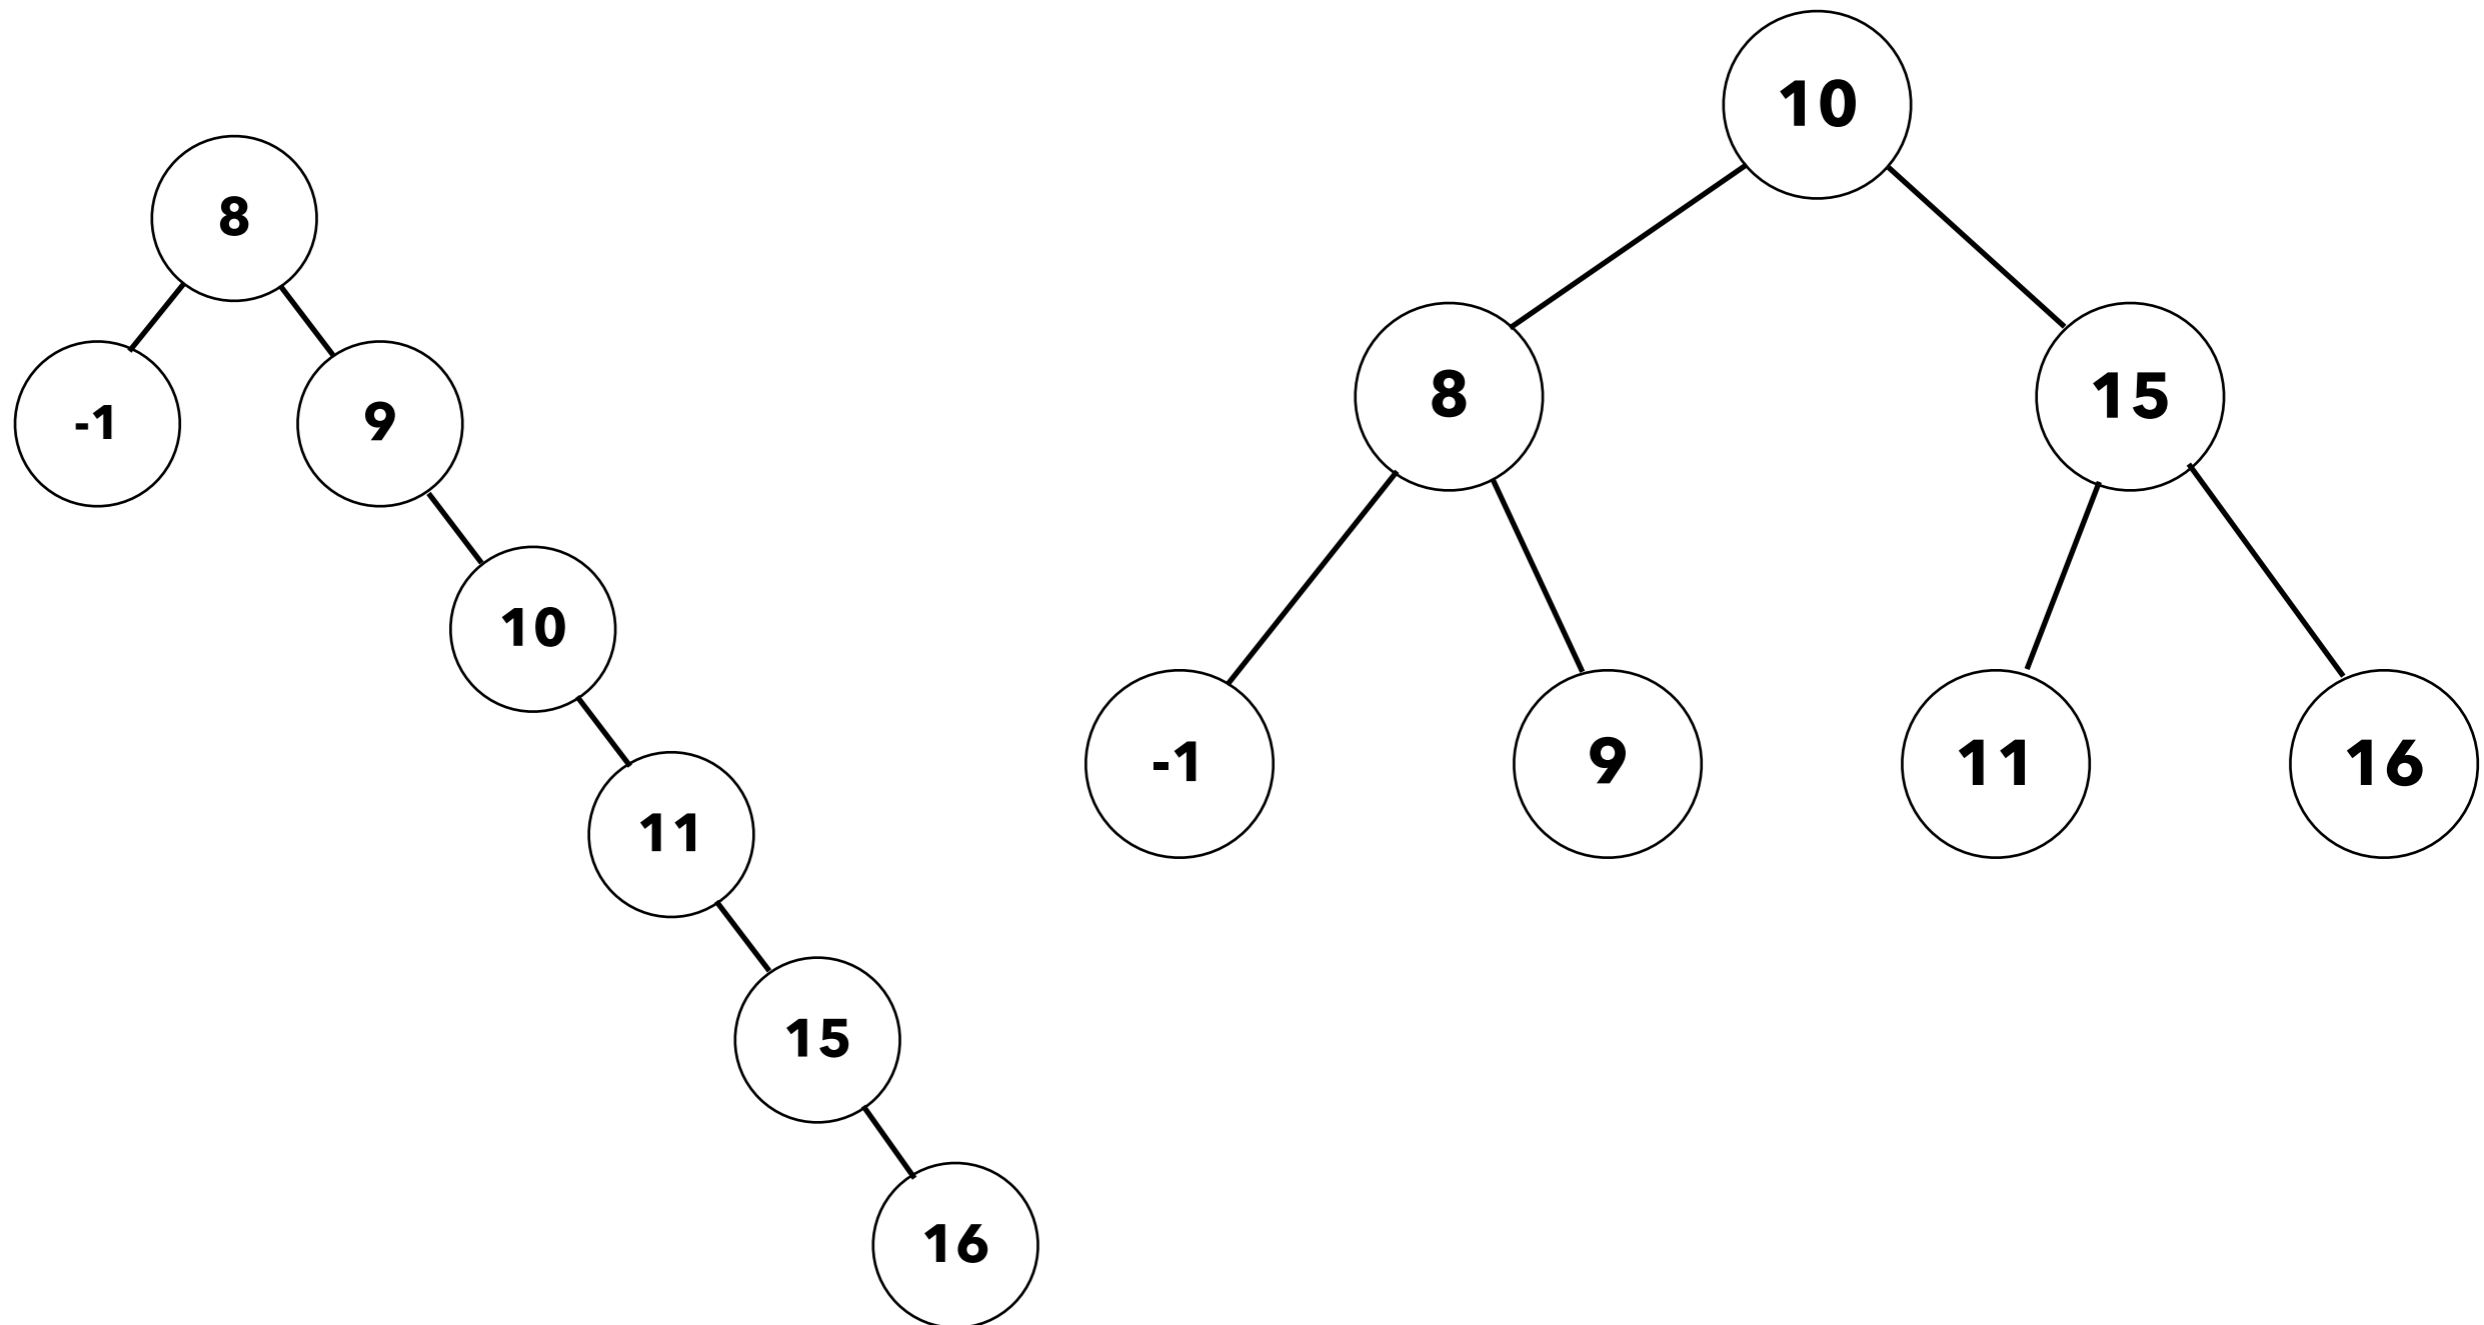

# Tree Badness

Hey Jude: can we take a bad tree and make it better?

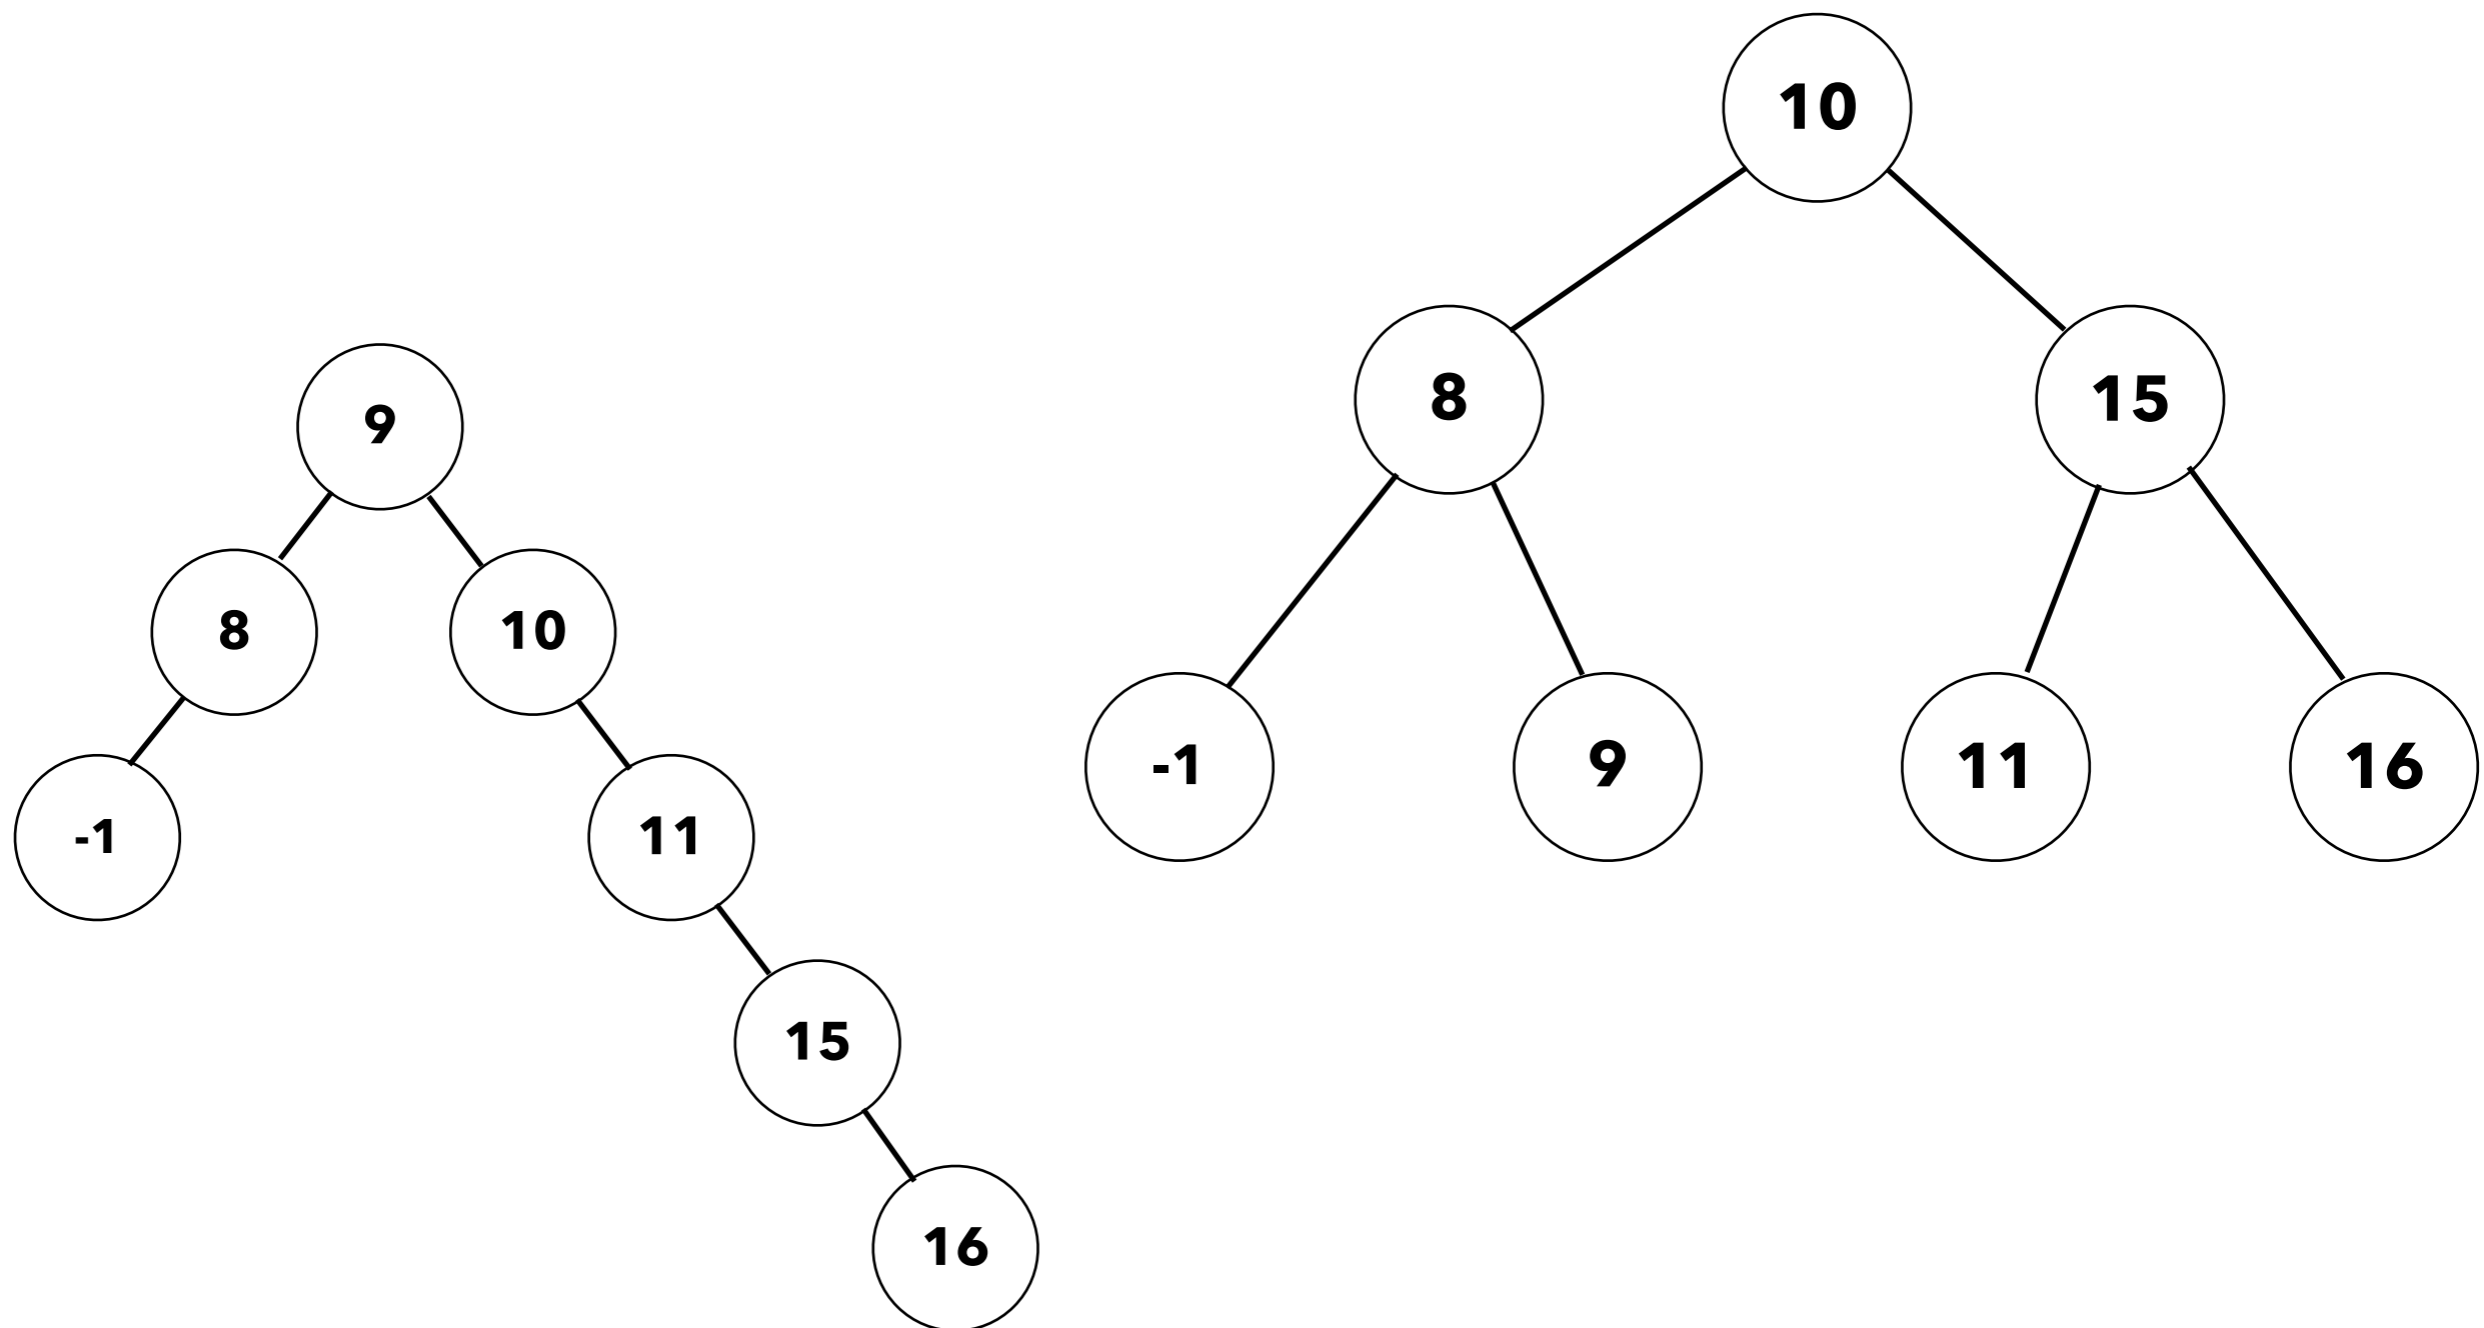

# Tree Badness

Hey Jude: can we take a bad tree and make it better?

# Tree Badness

Hey Jude: can we take a bad tree and make it better?

# Tree Badness

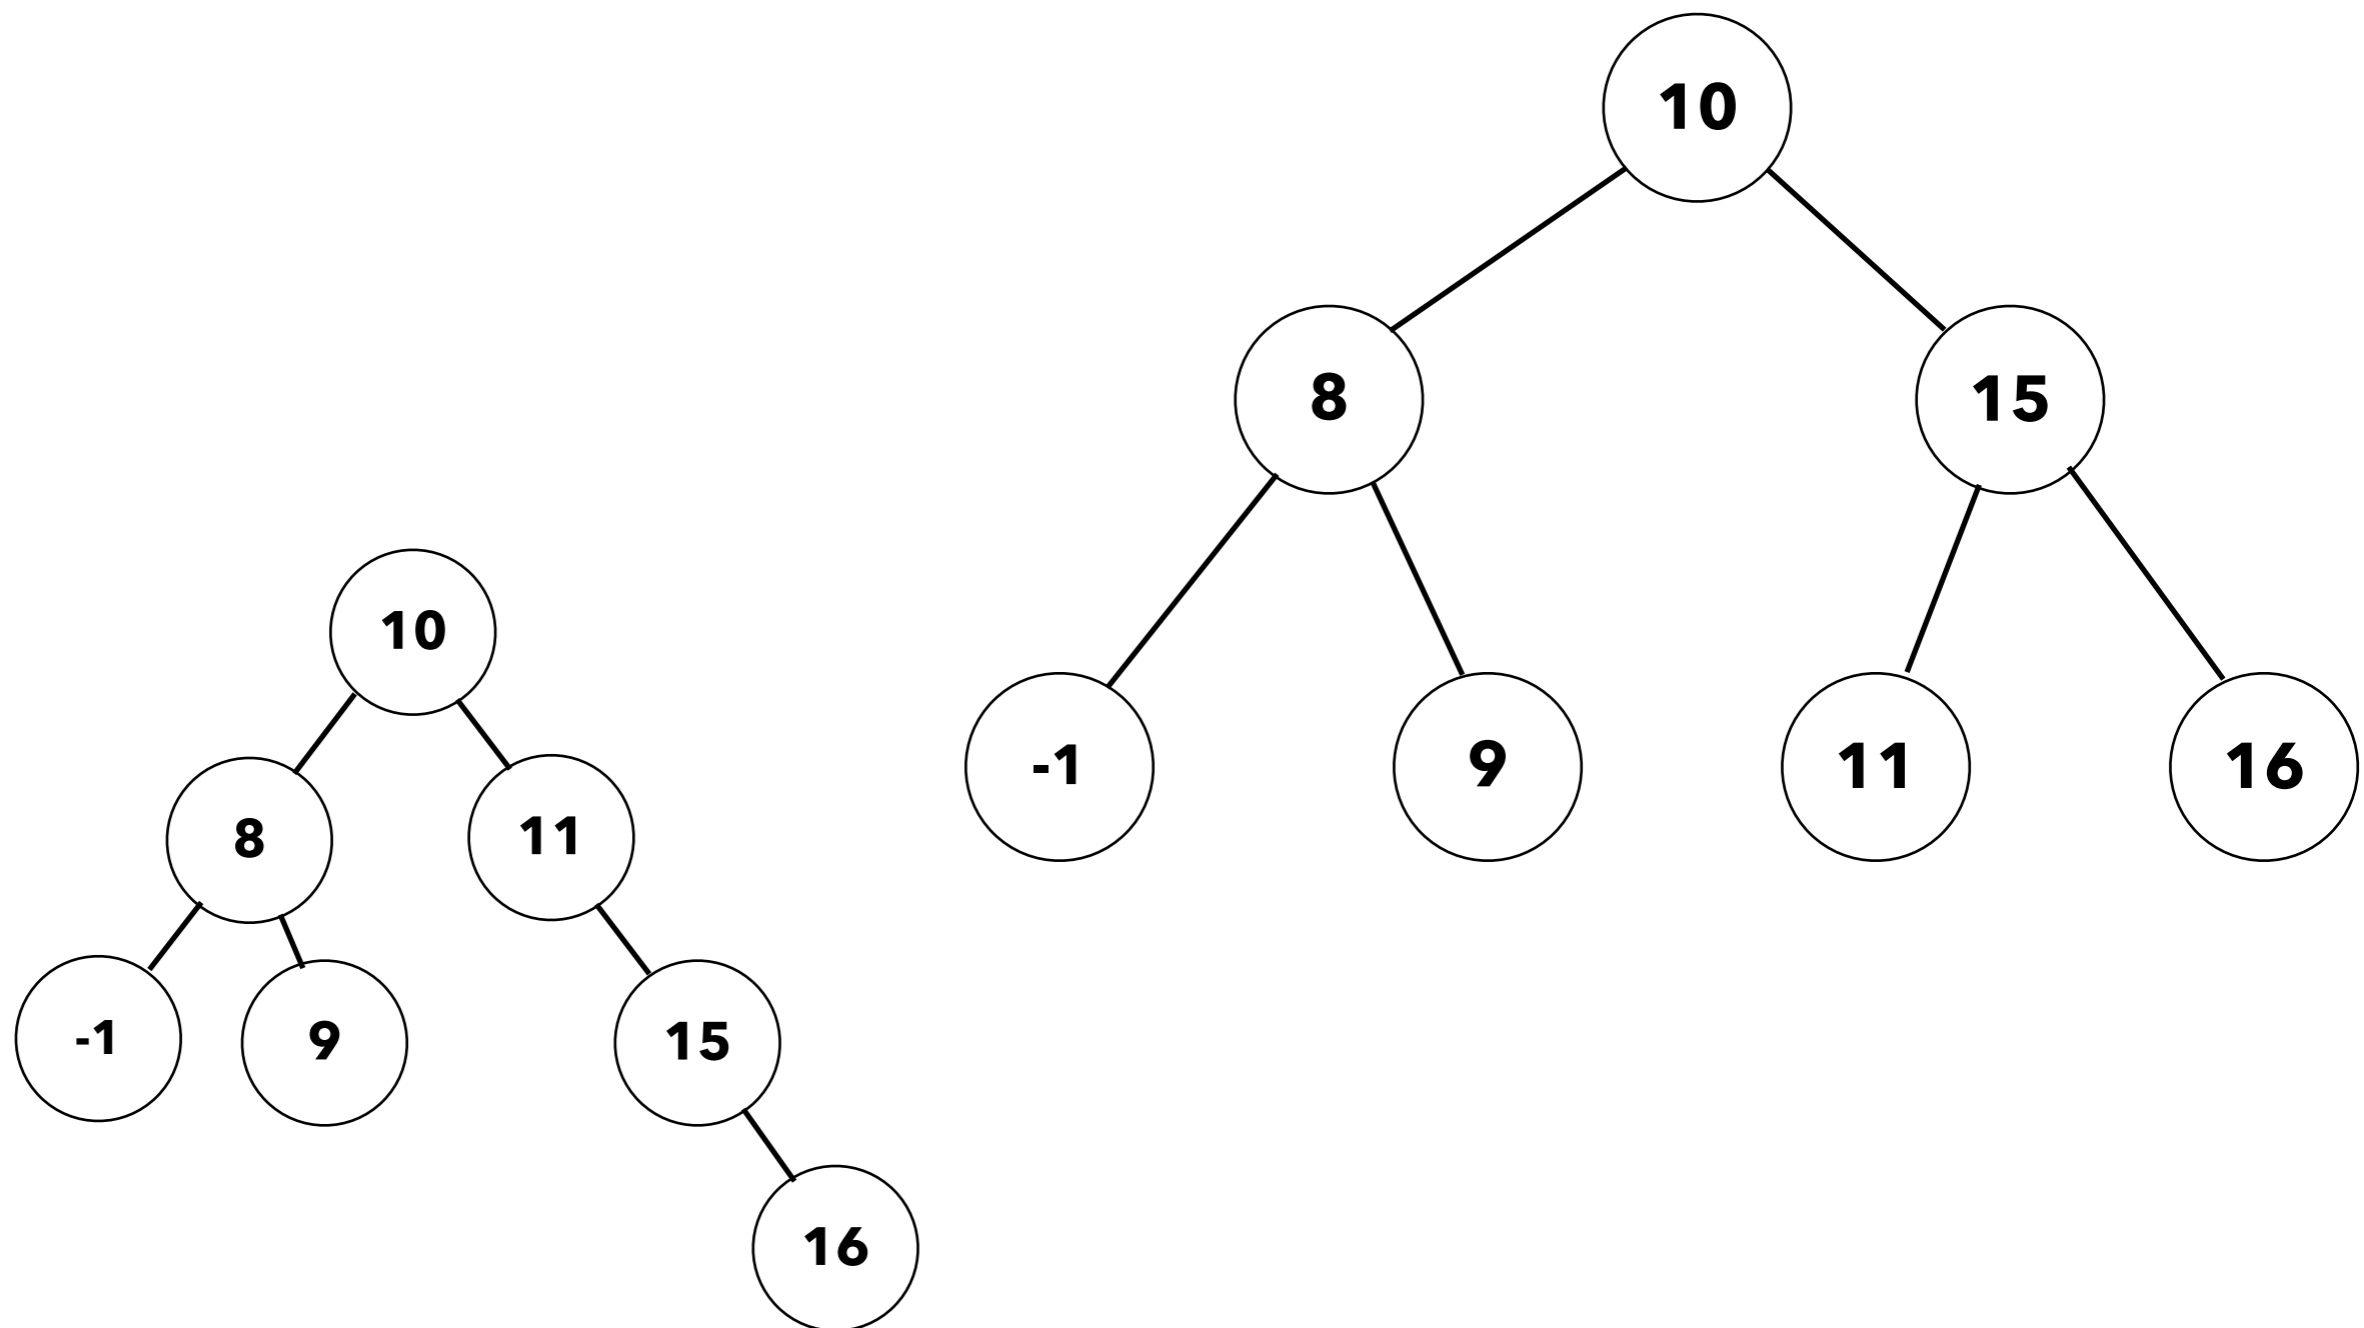

Hey Jude: can we take a bad tree and make it better?

# Tree Badness

Hey Jude: can we take a bad tree and make it better?

# Tree Badness

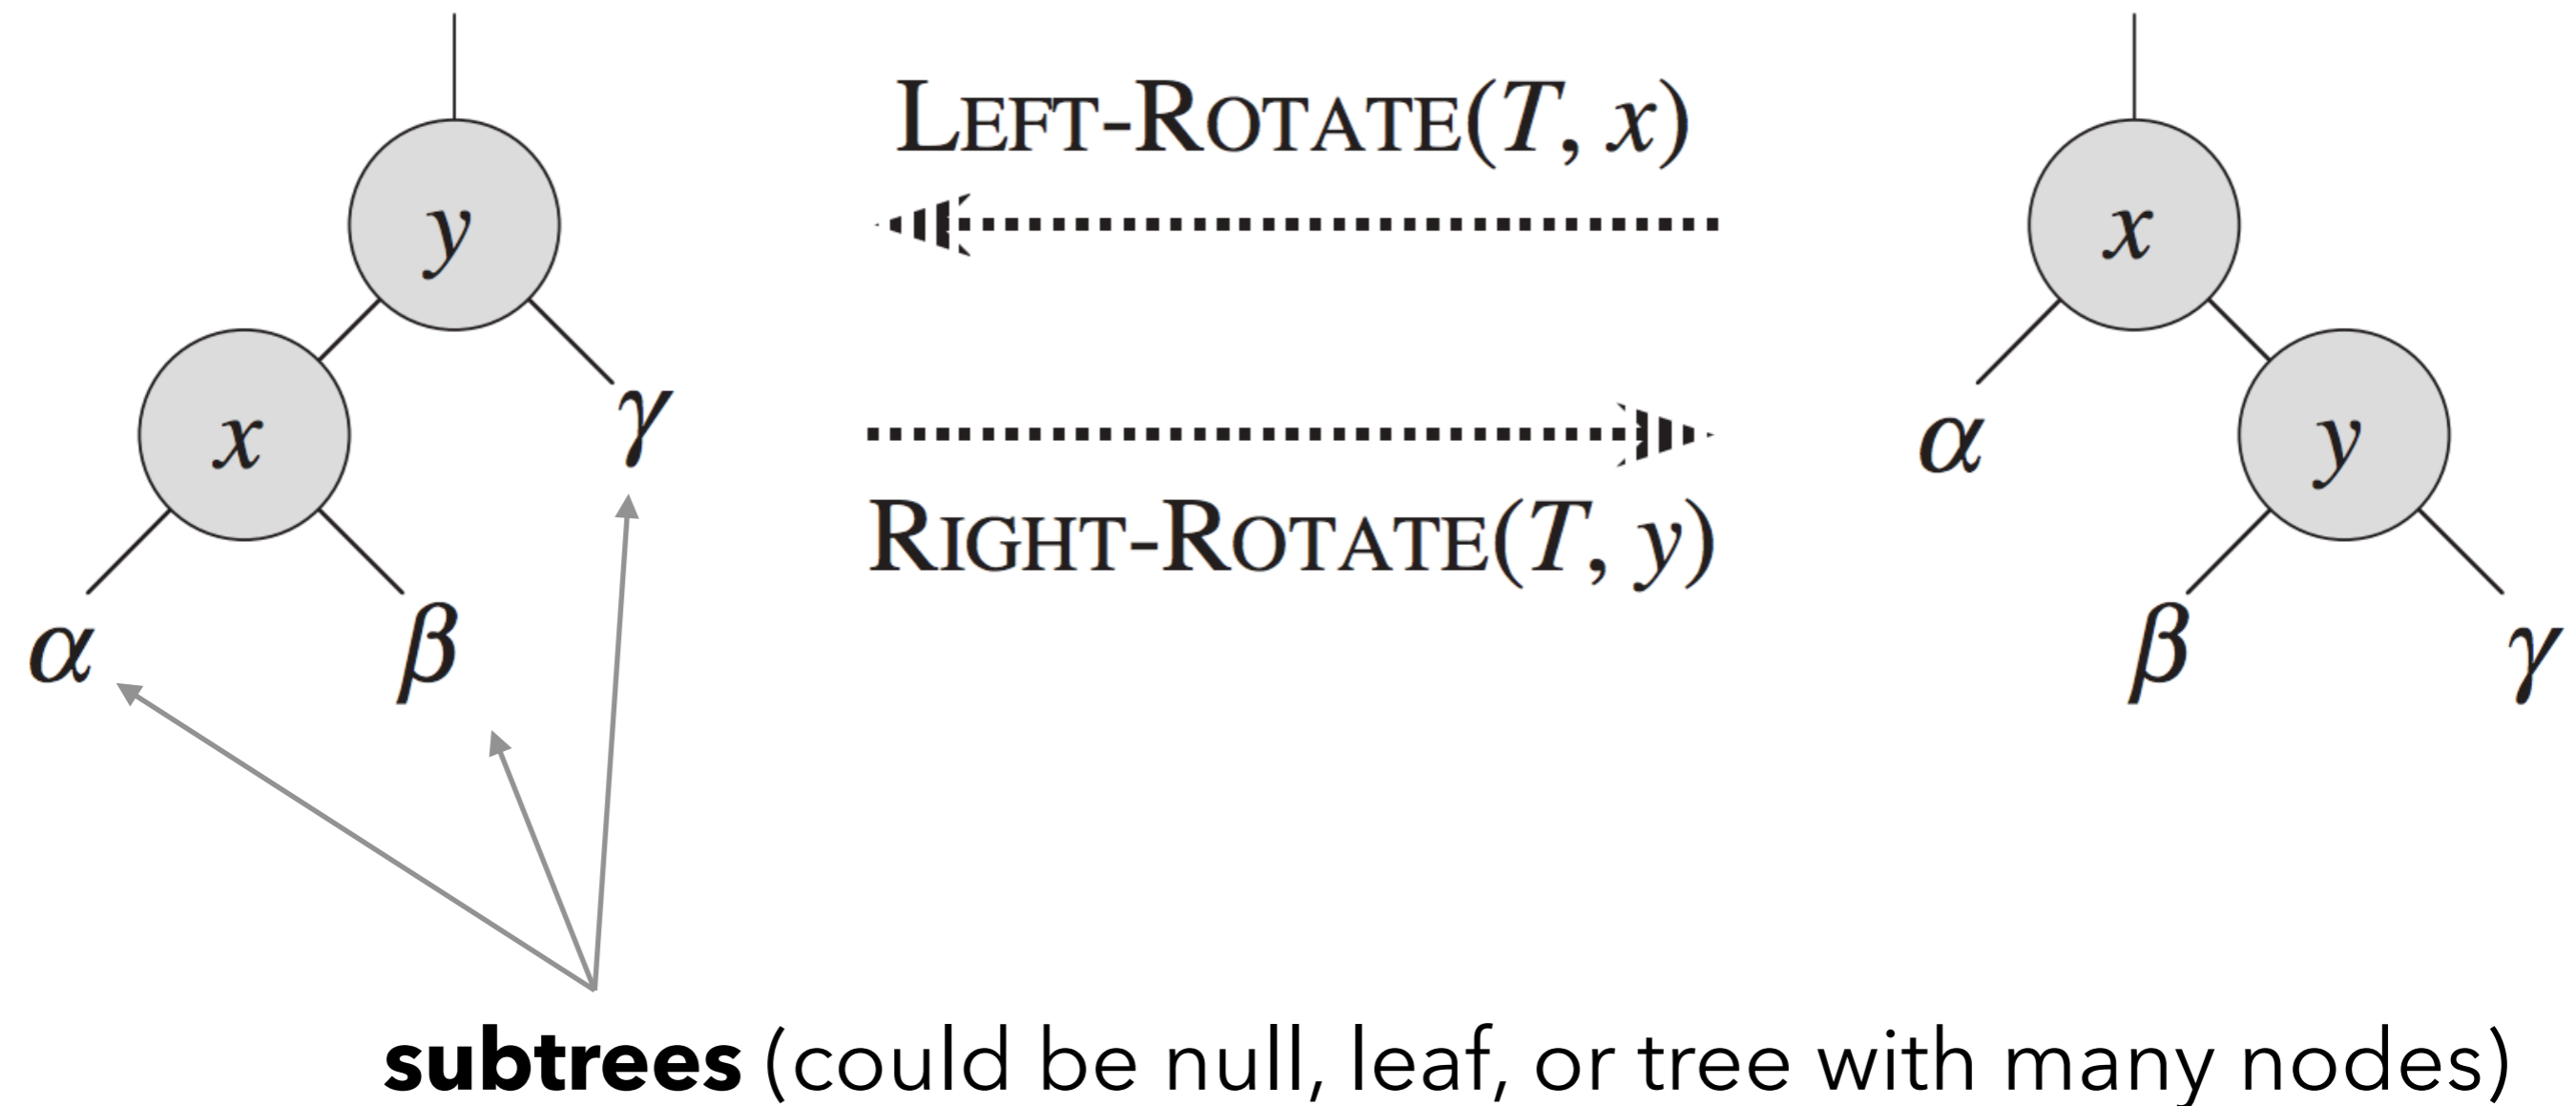

Hey Jude: can we take a bad tree and make it better?

(yes!)

# Tree Rotations

modify tree structure without violating the BST property.

# Tree Rotations

modify tree structure without violating the BST property.

Steps in **left rotation** (move  $y$  up to its parent's position):

1. Transfer  $\beta$ :  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. Transfer the parent:  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

LEFT-ROTATE( $T, x$ )

RIGHT-ROTATE( $T, y$ )

# Tree Rotations

modify tree structure without violating the BST property.

Steps in **left rotation** (move  $y$  up to its parent's position):

1. Transfer  $\beta$ :  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. Transfer the parent:  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

**Details:** need to update child, parent, and (possibly) root pointers.

LEFT-ROTATE( $T, x$ )

RIGHT-ROTATE( $T, y$ )

# Tree Rotations

Steps in left rotation (move  $y$  up to its parent's position):

1. Transfer  $\beta$ :  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. Transfer the parent:  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

# Tree Rotations

Steps in left rotation (move  $y$  up to its parent's position):

1. **Transfer  $\beta$ :**  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. Transfer the parent:  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

$x.R$  gets  $y.L$

$y.L.p$  gets  $x$

# Tree Rotations

Steps in left rotation (move  $y$  up to its parent's position):

1. **Transfer  $\beta$ :**  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. Transfer the parent:  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

$x.R$  gets  $y.L$

$y.L.p$  gets  $x$

# Tree Rotations

Steps in left rotation (move  $y$  up to its parent's position):

1. Transfer  $\beta$ :  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. Transfer the parent:  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

$x.R$  gets  $y.L$   
 $y.L.p$  gets  $x$

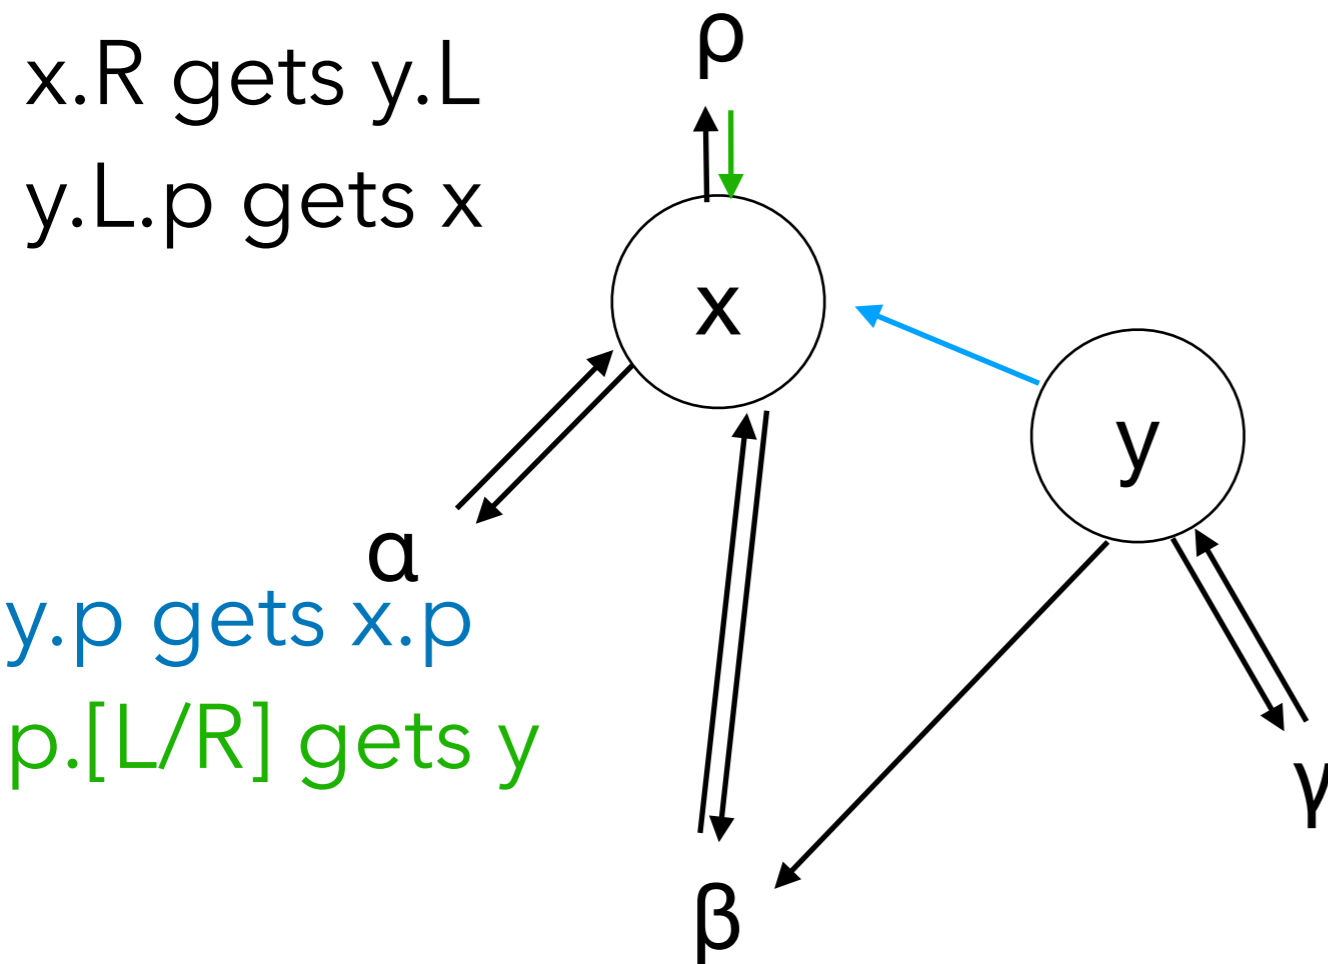

(**only** rearranged the picture)

# Tree Rotations

Steps in left rotation (move  $y$  up to its parent's position):

1. Transfer  $\beta$ :  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. **Transfer the parent:**  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

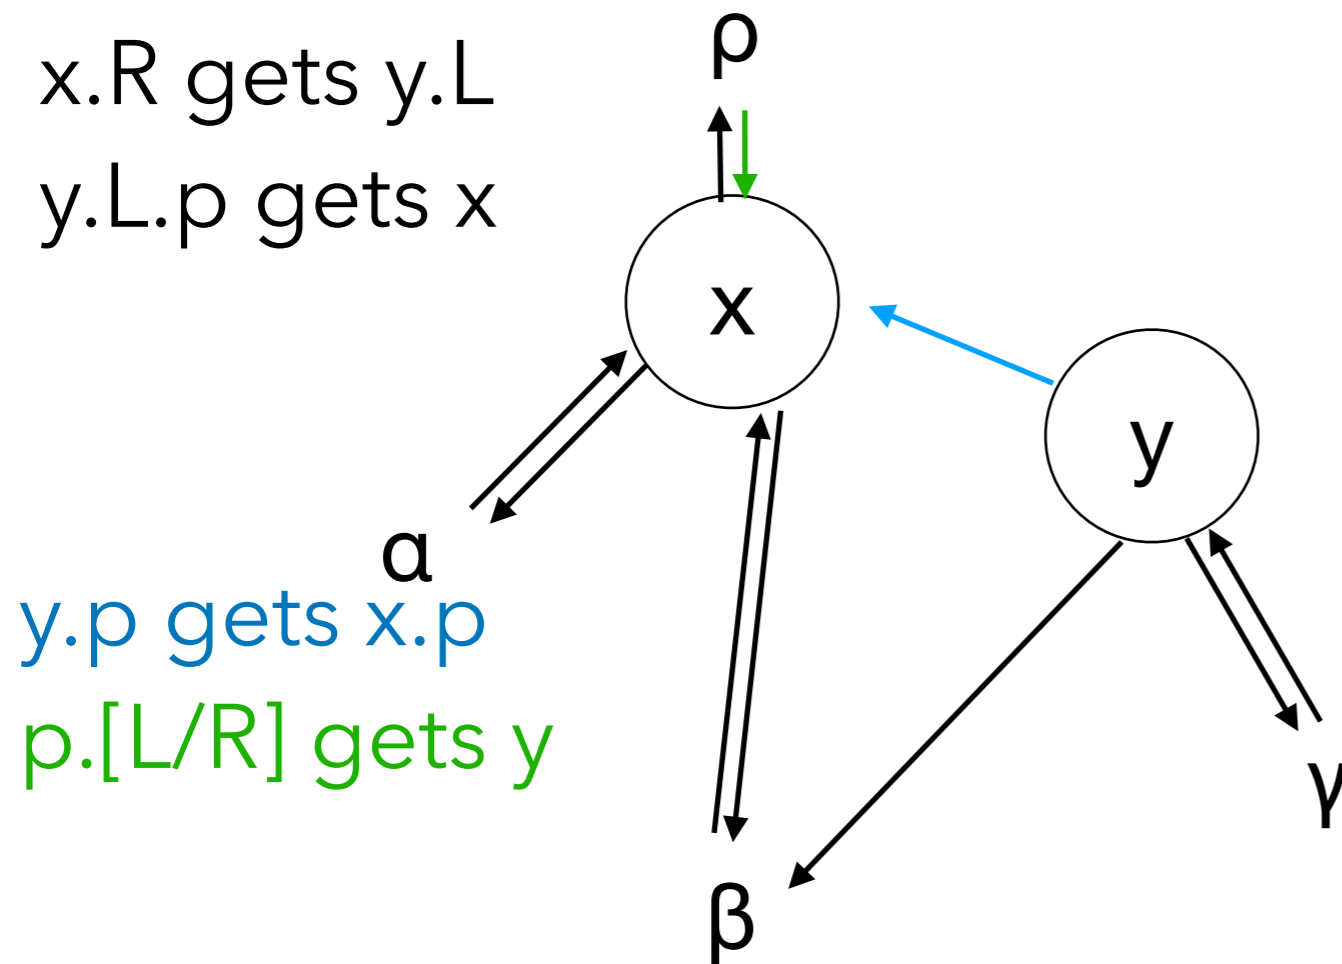

# Tree Rotations

Steps in left rotation (move  $y$  up to its parent's position):

1. Transfer  $\beta$ :  $x$ 's right subtree becomes  $y$ 's old left subtree ( $\beta$ )
2. **Transfer the parent:**  $y$ 's parent becomes  $x$ 's old parent
3. Transfer  $x$  itself:  $x$  becomes  $y$ 's left subtree

$x.R$  gets  $y.L$   
 $y.L.p$  gets  $x$

$y.p$  gets  $x.p$   
 $p.[L/R]$  gets  $y$

(what if  $\rho$  is null /  $x$  was root?)

# Tree Rotations

LEFT-ROTATE( $T, x$ )

RIGHT-ROTATE( $T, y$ )

**Overall Transformation**

# Pseudocode from CLRS

LEFT-ROTATE( $T, x$ )

1. xfer $\beta$	1	$y = x.right$	// set $y$
	2	$x.right = y.left$	// turn $y$ 's left subtree into $x$ 's right subtree
	3	<b>if</b> $y.left \neq T.nil$	
	4	$y.left.p = x$	
	5	$y.p = x.p$	// link $x$ 's parent to $y$
2. xfer parent	6	<b>if</b> $x.p == T.nil$	
	7	$T.root = y$	
	8	<b>elseif</b> $x == x.p.left$	
	9	$x.p.left = y$	
3. xfer $x$	10	<b>else</b> $x.p.right = y$	
	11	$y.left = x$	// put $x$ on $y$ 's left
	12	$x.p = y$	

Notational quirk: assume  $T.nil$  means "null"
